

Home Automation via Bluetooth

1. Introduction

Home automation allows users to control appliances remotely using Bluetooth and Arduino.

2. Objective

- Wireless control of devices
- Understanding embedded systems

3. Components

Arduino Uno, HC-05, Relay Module, Bulb, Wires

4. Working

Mobile sends command → Bluetooth → Arduino → Relay → Appliance ON/OFF

5. Output

ON → Bulb ON

OFF → Bulb OFF

6. Conclusion

A simple and low-cost automation system is achieved.
